

Additional observations help; the model advantage is smaller

TGBC18TKB · RT-FDC · dTomato FL2 maximum + nominal arm · partial Table 6 area/ratio filter
39,053 events · 9 dates · 81 frozen bundles · 324 cases · full NN = reporter + arm · no refitting

Before additional observation Same-event observation Within-file donor observation

Date/arm macro weighting. Bars start at zero; difference panels show every date/seed with zero references. Positive difference is worse.
Same image contour; already inspected dates. No independent biological generalization or causal claim. Study doi:10.7554/eLife.87930
