

Same-event observations are available; derived metrics are not extra assays

TGBC18TKB • two 2019-12-19 acquisition exports • all 2,690 rows retained without further filtering

528 events at exported FL minimum
41.1%; origin unresolved

1,244 events at exported FL minimum
88.6%; origin unresolved

Area + shape + flow assumptions → exported elastic modulus; contour rotation → exported volume.

These are measurement dependencies, not independent latent-parameter labels. Reporter intensity is not absolute CAV1 abundance.

No biological effect or model score is inferred. Sample/event filtering, minimum-value origin and per-session conditions remain unresolved.
