

Axial and bending measurements need an explicit material model

Different assays estimate EA and bending rigidity. A shared source family does not create a measured joint relation.

Solid arrows: documented calculation. Dashed arrows: unresolved interpretation.

Keep measurement uncertainty, material assumptions and current declarations separate; do not invent covariance.

Kojima et al. 1994, DOI 10.1073/pnas.91.26.12962 (FM01); Gittes et al. 1993, DOI 10.1083/jcb.120.4.923 (FM02). FG01 is a conditional calculation, not an adopted model.
