

The same μM unit can refer to three different volumes

Selected construction paths at frozen source 24b3a44c. These are code interpretations, not measurements or an observed runtime state.

A concentration can supervise an input only after the counted species, compartment, volume convention and cell state are matched.

Static sources: quantity_semantics.json Q01 / Q04 / Q05; selected spans in assemble.py, severing.py, nucleation.py and build/part.py. No physics or prior runtime executed.
