

A diffusion radius does not identify water conductance

Keminer & Peters (1999): radius is inferred first; length is calculated using that radius and single-channel transport.

Solid arrows: documented calculation. Dashed arrows: unresolved interpretation.

The source links radius and length through a calculation. It supplies neither independent geometry labels nor a current covariance.

Keminer & Peters, Biophys J 1999, DOI 10.1016/S0006-3495(99)76883-9, Eqs. 7–8 and Table 2. NT02 is unregistered in the frozen KB. Source ranges are not confidence intervals.
